

# INFLIXIMAB (Remicade)

92:36 – Disease-Modifying Antirheumatic Drugs

## PHARMACY PREPARATION:

- Reconstitute each 100 mg vial of infliximab with 10 ml sterile water. Swirl gently, do not shake. The total dose of the reconstituted product must be further diluted with 250 ml of 0.9% sodium chloride
- Round the dosage up to the nearest 100 mg

## STABILITY:

- Use immediately. Infusion should begin within 3 hours of preparation.

## ADMINISTRATION:

- Establish IV access and administer with a non-pyrogenic, 1.2 micron or less, low-protein binding filter.
- Flush and prime tubing/filter system with NS before administration of infusion.

## INFUSION:

- Infuse over at least 2 hours
