

PDMP Integration Updates

Go-Live May 1, 2024

PDMP Epic Integration

Illumicare Ribbon Controlled Substances and NaRxScore Storyboard Integration Updates

- Illumicare SmartRibbon subscription will end on April 30th, 2024, as we move toward utilizing software tools integrated within the electronic health record
- Epic users will still have alternative options to access the Texas PMP
 - [Texas PMP Aware Website](#)
 - NaRx Score Storyboard link
 - PDMP Review tab

Epic PMP Report – Pharmacy Access

National Provider Identification (NPI) Number Requirement

- To access the PMP report through Epic, an NPI number must be associated with the individual's Texas PMP user profile
- Individuals may register for an NPI number through the National Plan & Provider Enumeration System website at <https://nppes.cms.hhs.gov/#/>
 - Additional instructions for updating your Epic user profile and Texas PMP account will be provided by your management team

PDMP Review Options

PDMP Review Options

Illumicare Controlled Substance, Texas PMP Website, and NaRx Score / PDMP Review Tool

NaRx Score Storyboard link

- EHR integration via patient Storyboard
- No log-in required
- Automatic report generation within Epic (no separate window)
- Prescription report limited to Texas and surrounding states

Texas PMP AWARxE Website

- Requires separate browser outside of EHR
- Separate log-in
- Custom entry of patient specific information (manual entry)
- Include additional states if needed
- Update your profile

Illumicare Smart Ribbon – Controlled Substances Button

- EHR integration via Illumicare SmartRibbon
- PIN-based log-in
- Automatically imports patient information
- Prescription report limited to Texas and surrounding states unless all states defaulted in PMP profile

PDMP Report

Prescription report will appear in Sidebar Summary

Once review is complete, click “Mark as Reviewed and Close”

The screenshot displays the PDMP (Prescription Drug Monitoring Program) report interface. At the top, there are navigation tabs: Sidebar Summary, Vigilanz, New i-Vent, Admission Orders Rec, and PDMP. The main content area shows patient information: Patient Name (Contact the Bamboo Health Knowledge/Help Center), Date of Birth, Recent Address, and Status of States Queried. A 'View Details' link is present. Below this, there is a section for 'View Linked Records (0)' and 'Other Tools/Metrics'. A yellow message box states: 'No patient matching the search criteria submitted was identified. If you believe a dispensation record exists for this patient, we recommend you manually search your state PDMP site with different search criteria and/or utilize partial search (if available)'. The 'UNINTENTIONAL OVERDOSE RISK SCORE MODEL' section shows a score of '000' which is 'BELOW AVERAGE'. Below this, 'NARX SCORES' are displayed for Narcotics, Sedatives, and Stimulants, all with '000' scores and '0' active prescriptions. At the bottom, there are three buttons: 'Mark as Reviewed and Close' (highlighted with a red box), 'Mark as Unable to Review and Close', and 'Close'. The footer indicates the report was last reviewed by 'i, MD' on 12/22/2023 at 12:17 PM.

PDMP Review: Tips and Reminders

PDMP and Medication List Discrepancies

- NaRx Score 000 \neq 0 prescriptions
- If controlled substance are on patient's medication list but no prescription report found in Epic report:
 - Prescriptions filled out of state
 - Patient name or DOB reported on Texas PMP website may be different from chart
 - Multiple patient profiles listed on Texas PMP website
- Solution: Confirm information on actual Texas PMP website

Patient Report Discrepancies – Example

PDMP Order Verification Reminders

HM Best Practice Alert

- PDMP check required for fentanyl patch, methadone, and extended-release morphine and oxycodone

Patient Safety (1)

Review PDMP Information: Order for Fentanyl Patch, Methadone, MS Contin or Oxycotin

- PDMP checks required to ensure appropriate orders
- PDMP information available through Illumicare Smart Ribbon or Texas PMP AWARxE
 - If methadone prescription information unavailable, open i-Vent to clinical pharmacist for outpatient opioid use disorder clinic review
- Conduct further review and/or contact provider if clinical significant discrepancies exist

Methadone for OUD Review

System_RXCLIN 170 Procedure for Obtaining & Reviewing Medication History

A. Oral Methadone Orders Review

- a. Complete a medication history following steps A-H above if not previously completed on the same admission
- b. If a methadone order is identified, Prior to verification of oral methadone orders, a PDMP review will be conducted by the pharmacist.
- c. If information regarding oral methadone use is not available through the PDMP or medication dispense history because the prescribing location is an Opioid Treatment Program, escalate the review to the clinical pharmacist.
- d. Order verification pharmacist will open an i-Vent
 - i. Type: Communication to Clinical Specialist
 - ii. Subtype: Methadone
 - iii. Status: Open
- e. Clinical pharmacist will attempt to verify the methadone dose with patient's outpatient Opioid Treatment Program. NOTE: these facilities have limited operational hours (e.g. mornings during the week and are closed on weekends)
 - i. Determine the methadone clinic used by the patient for their OUD
 - ii. Identify the methadone indication, dose, frequency, last dose taken, and quantity supplied by outpatient treatment program.
 - iii. If unable to contact the facility and if available, a patient's medication bottle may be used to verify the needed information. Note the last filled date to ensure current prescription.
- f. If the patient's home dose cannot be confirmed, do NOT verify the order. A lower dose (no more than 20 mg) may be administered until patient's home dose can be verified. An updated order must be obtained from the authorizing provider.
- g. Assess relevant drug interactions, laboratory values, and QTc monitoring.
 - i. Methadone is a major CYP3A4 and CYP2B6 substrate
 - ii. Baseline ECG (evaluate QTc interval) is recommended in certain patient populations and with use of high doses (ie, >120 mg). Repeat ECG should be repeated 2 to 4 weeks after initiating therapy, after significant dose increases, and with new risk factors or signs/symptoms of arrhythmia occur.
