

IREDELL HEALTH SYSTEM

Floor Stock	
Approved by: Amy Wingler, CPhT Randi Raynor, PharmD, MBA, BCPS	Last Revised/Reviewed Date: 06/2022
P&T Committee	Date: 06/2022

Policy

The use of floor stock drugs and drug-related supplies shall be minimized.

Background

Medications are considered “Floor Stock” if they will be stocked on the nursing units and not dispensed from the pharmacy at the time of order entry. These medications may be stocked in the Automated Dispensing Cabinet (ADC), in locked cabinets on the nursing units or other clinical departments, or in medication rooms.

Limits on Floor Stock

Floor stock shall be limited to drugs that are frequently required for immediate use, emergency drugs, patient comfort items, and drug-related supplies.

Approval by P&T Committee

Approval of medications considered for floor stock shall be obtained by the P & T Committee. The P & T Committee shall consider the safety and necessity of allowing the medication to be stored outside of the pharmacy. Requests for medications to be added to floor stock shall be forwarded to the Pharmacy Director or designee in writing (via E-mail or memo format). Once the request is received, it will be reviewed at the next scheduled P & T Committee meeting.

PAR Levels

The pharmacy shall establish the quantities (par levels) of drugs and drug-related supplies to be stocked in specified areas. The pharmacy shall maintain floor stock at predetermined or reasonable levels.

Integrity of Floor Stock

The pharmacy shall ensure the integrity (i.e., security, adequacy, storage conditions, etc.) of floor stock. Pharmacy personnel shall check this stock regularly and report discrepancies to appropriate supervisors.

Master Floor Stock List

The pharmacy shall maintain a master list that includes the location, and name of all drugs and drug-related supplies in floor stock. *See Appendix A.*

INITIAL EFFECTIVE DATE: 10/2010

DATES REVISIONS EFFECTIVE: 08/2022
