

# OB Hemorrhagic Kit L&D, MBU, and EDs

## What is changing and why?

- ❖ OB Hemorrhagic Kits are currently available and are managed locally by your facility's pharmacy.
- ❖ The kits are now standardized and managed by the system pharmacy team as part of the system approved L&D/MBU-nursery override list implementation.
- ❖ The same 5 meds will be in every kit

## To access, follow these instructions:

1. Choose a patient and select **Remove** or **Override**. At the bottom of the next screen, select **System Kits**.
2. Select the **OB Hemorrhagic Kit**. The medications will populate on the right side of the screen. Select **Remove**.
3. You will now be guided by Pyxis through pulling each of the 5 medications.
4. You may pull all of them or deselect those you don't want to pull
  1. If you pull a med and don't use it, return it to the PYXIS
